

Tetrad by Physical Audio – Windows Installation

Currently we do not use full installer programs for Windows installation, as we're waiting for Microsoft to roll out Azure Trusted Signing in the UK. For now you simply place the VST3 / AAX in your plug-in folders, and run a Batch file to install the presets.

Extract the downloaded zip file, and then do the following.

1. Install the VST3 and/or AAX

The standard locations for the Tetrad.vst3 and/or Tetrad.aaxplugin are:

`C:\Program Files\Common Files\VST3`

`C:\Program Files\Common Files\Avid\Audio\Plug-Ins`

Note that the plugins are component bundles, which have a folder icon.

2. Install the Presets

The presets are contained in a folder labelled 'Presets'. To install them double-click the Install_Presets.bat file. This will move them into their correct location.

The preset folder location can be confirmed by clicking the Info button in Tetrad, and the path is shown at the bottom of the window.

3. Notes

Tetrad uses a Dynamic link to the Microsoft C++ runtime libraries. If you are using an older version of Windows 10 and the plug-in doesn't show up in your DAW, please check that you have a version of the Microsoft Visual C++ Redistributable installed on your machine. Details can be [found here](#).
